

Gabion Fence

Typical Applications

Land reinforcement and soil retention

Acoustic barriers

Military defence barriers

River, flood and coastal protection

Domestic garden walls and features

Gabions

For many years our Gabion baskets have been, and continue to be utilised in large civil engineering and military projects, but recently landscape gardeners have found innovative and attractive ways to use them. Gabions can retain garden walls creating an aesthetically pleasing effect that blends in with the landscape.

The versatility of Gabion Mesh is virtually limitless in the garden. It can create strong, uniquely designed garden benches and surrounds for barbecues, ponds and planters. Pillars can be constructed by filling the baskets with rocks and interlocking them on top of each other.

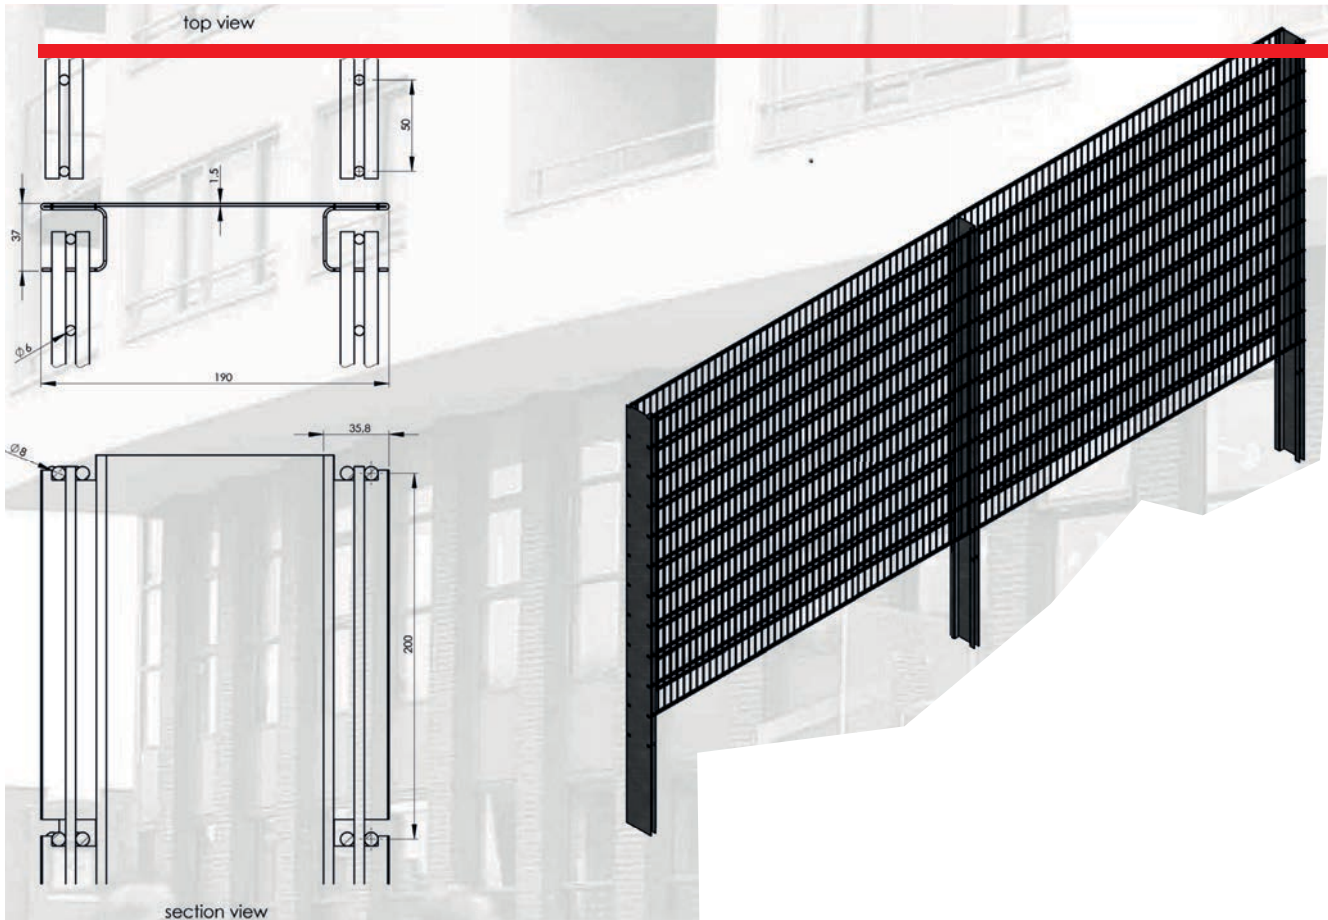

River Bank and Land Reinforcement

Gabion baskets for river and land projects are often rectangular with the wire boxes filled with stones or rocks. They are used where flow speed is high, made from heavy, strong galvanised steel and often coated with PVS for enhanced corrosive protection.

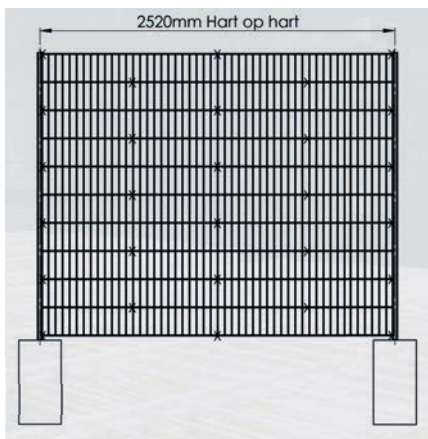

Often stacked on steep slopes, Gabions protect river banks from erosion and periodically need inspection and maintenance.

Due to the structure of Gabions they provide natural drainage and with minimal maintenance can last a lifetime.

Gabion Fence

Position and amount of anchors for Gabions

Profile lengt	Panel height	Minimum amount anchors
1400 mm	800 mm	13 pcs.
1600 mm	1000 mm	15 pcs.
1800 mm	1200 mm	18 pcs.
2000 mm	1430 mm	21 pcs.
2200 mm	1630 mm	24 pcs.
2400 mm	1830 mm	27 pcs.
2600 mm	2030 mm	30 pcs.
2800 mm	2230 mm	33 pcs.

Installation of the anchors
