## Bow top fencing

Bow top fencing offers an aesthetic solution for securing and maintaining safety in a wide range of applications

It is a popular choice for parks and recreation grounds, car parks, gardens, landscaped areas and educational establishments. The fencing range can be directly buried into the ground as a conventional post and panel formation, or alternatively we offer wall-mounted versions, designed to either bolt onto the wall or be included as part of the wall's construction.

The use of brick walls can supply additional height and also offer a stylish and modern appearance suitable for use in architectural designs. We offer a range of variant designs which can be specified to enhance most environments.

Initially developed as an alternative to traditional vertical bar fencing, our Bow top range offers strength, rigidity and durability in one product configuration. The fence panel is secured to the post using a tamper-resistant pin, which reduces the risk of unauthorised tampering and interference.

Bow top fence panels are supplied and manufactured with 2.75m centres. Standard heights include 1.0m, 1.2m, 1.5m, 1.8m, 2.0m, 2.1m, and 2.4m. Custom heights are available to order. The bow top product can be specified to meet the requirements of BS 1722 part 9.

Materials can also be specified by our clients, typically 12mm diameter bar at 1.2m high, and 22mm diameter bar at 2.4m high. Paramount Bow top decorative fencing is supplied fully galvanised as standard to BS EN ISO1461.
